1 Introduction

1.1 The American Community Survey

The American Community Survey (ACS) is a household survey conducted by the U.S. Census Bureau that currently has an annual sample size of about 3.5 million addresses. ACS estimates provides communities with the current information they need to plan investments and services. Information from the survey generates estimates that help determine how more than \$400 billion in federal and state funds are distributed annually. Each year the survey produces data that cover the periods of 1-year, 3-year, and 5-year estimates for geographic areas in the United States and Puerto Rico, ranging from neighborhoods to Congressional districts to the entire nation. For more information about the ACS, please visit our home page, www.census.gov/acs. ACS tables are published on the Census Bureau's American FactFinder (AFF) website, factfinder2.census.gov, and are available for download in several forms.

1.2 The 2006-2010 ACS 5-Year Selected Population Tables

The 2006-2010 ACS 5-Year Selected Population Tables (SPT) is a new data product which uses ACS data aggregated over a 5-year period to provide more reliable estimates of detailed social, economic, and housing characteristics for many race, tribal, Hispanic, and ancestry population groups at multiple levels of geography. Detailed tables on topics such as educational attainment, fertility, nativity, citizenship, income, poverty, and homeownership are iterated for many racial and ethnic population groups.

For the SPT, detailed tables are presented for up to 392 population groups in geographies down to the tract level where population thresholds were met. The iteration groups include the total population, race alone groups, race alone or in combination groups, multiple-race combinations, American Indian and Alaska Native tribal groupings, detailed Asian groups, detailed Native Hawaiian and Other Pacific Islander groups, detailed Hispanic groups, race/Hispanic groups, and ancestry groups. The Census Bureau will issue new sets of 5-year estimates for the Selected Population Tables once every five years.

1.3 The ACS Selected Population Tables Summary File

The ACS Selected Population Tables Summary File (SPTSF) is a unique data product that will provide downloadable estimates and margins of error for the detailed tables published in the SPT.

Since the detailed tables contain a large number of cells, the tables are stored in a series of files with only the data from the tables. Other files contain such information as the title of the tables, the description of the rows, and the names of the geographic areas. The user must merge the data files and the files with the other information to reproduce the tables.

The ACS SPTSF data files are in American Standard Code for Information Interchange (ASCII) format. The files are divided into three types:

- Geographies (position based and comma delimited)
- Estimates (comma delimited)
- Margins of Error (comma delimited)

Section 2 discusses each component in detail and explains how to put them all together.

1.4 Topics and Geographies Covered

The topics and geographic area covered in the ACS SPTSF are a subset of those contained in the 2006-2010 ACS 5-year standard products released in November 2011.

Data contained in the ACS SPTSF cover social, economic, housing, and demographic subject areas. There are 266 Detailed Tables produced for the SPT, and they are listed in Appendix E.

The published ACS SPTSF geographies cover areas that are based on "summary levels." A summary level specifies the content and the hierarchical relationships of the geographic elements that are required to tabulate and summarize the data. For example, summary level code "040" represents the U.S. states, including Washington D.C., and Puerto Rico; while summary level code "050" represents counties and county equivalents within states. A list of the covered suumary levels is in Appendix F.

Many resources are available to help users understand the ACS geographic terms and concepts. For additional information, please visit www.census.gov/geo/www/reference.html and www.census.gov/acs/www/guidance for data users/geography/.

1.5 Notable Differences from the 5-Year Summary File

The summary files for the ACS SPTSF are similar to the 2006-2010 ACS 5-year summary files with the following exceptions.

- The ACS SPTSF will have only one set of files. This is in contrast to the 2006-2010 ACS 5-year summary files which contained three sets of the files:
 - o 2006-2010_ACSSF_All_In_2_Giant_Files(Experienced-Users Only)
 - o 2006-2010_ACSSF_By_State_All_Tables
 - o 2006-2010_ACSSF_By_State_By_Sequence_Table_Subset

All of the data for a state will be in a single zip file (closest to the 2006-2010_ACSSF_By_State_All_Tables format). Details are in Section 2.2 and Appendix B.

• The SPTSF does not contain any tables that do not fit in a single sequence; none of the tables that are too large for one sequence is part of this product.

• Unlike the 2006-2010 ACS 5-Year Summary Files, in the SPTSF all geographies, including tracts, will be in the same file.

1.6 Contact Us

Please send any technical questions or comments on the ACS Summary File you have via email to: acso.users.support@census.gov. If you have questions or comments about the American Community Survey, you can submit a question online at ask.census.gov.

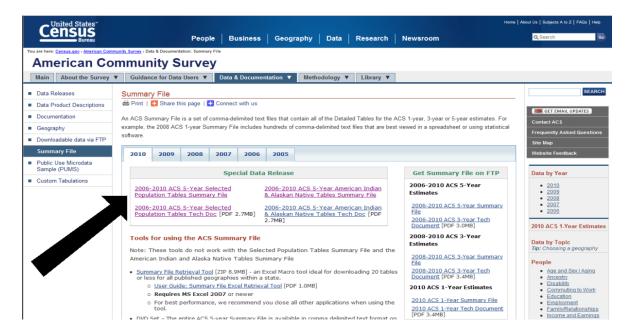

2 How to Use the ACS Summary File

2.1 Locating the Summary File

The SPTSF is accessible from the American Community Survey home page. From the ACS home page, <u>www.census.gov/acs</u>, click on the **Data and Documentation** tab; select the option for **Summary File**, as shown below:

That will take you to the ACS Summary File page. Click on **2006-2010 ACS 5-Year Selected Population Tables Summary File** to go to the ACS Summary file:

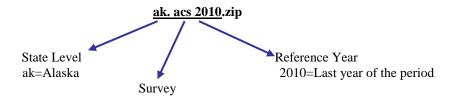

U.S. Census Bureau People | Business | Geography | Newsroom | Subjects A to Z | Search@Census Last modified Size Description Parent Directory ACS_SPT_SF_Tech_Doc.pdf_08-May-2012_14:32__2.7M ACS_SPT_TableShells.xls 20-Apr-2012 09:59 481K <u>Alabama/</u> 04-May-2012 10:29 -Alaska/ 04-May-2012 10:30 Arizona/ 04-May-2012 10:30 Arkansas/ 04-May-2012 10:30 California/ 04-May-2012 10:33 Colorado/ 04-May-2012 10:33 Connecticut/ 04-May-2012 10:33 Delaware/ 04-May-2012 10:33 DistrictOfColumbia/ 04-May-2012 10:33 Florida/ 04-May-2012 10:34 Geography/ 27-Apr-2012 13:54 Georgia/ 04-May-2012 10:35 Hawaii/ 04-May-2012 10:35

This is a screenshot of the directories that contain the ACS SPTSF files.

2.2 Summary File Organization

This directory contains zipped files for each state or state level equivalent--each of the 50 states, District of Columbia, Puerto Rico, as well as cross-state geographies such as metropolitan areas. Each zipped file contains a geography file in two formats and multiple estimate and margin of error files. For a graphical representation of this folder and its contents, go to <u>Appendix B.</u>

The naming convention used for the zipped files in this directory is the following:

2.3 Sequence Numbers

Detailed Tables for similar subject areas are grouped together in "sequences". A sequence number is an assigned number to a grouping of ACS tables, and it may change from year to year or product to product (1-, 3-, or 5- year data sets). The rules governing how many tables can be assigned the same sequence number depend on the following:

- There are no more than 256 columns per sequence, so the data can be read into a spreadsheet.
- Tables are grouped into sequences according to subject area.

It is critical to know the sequence number associated with a Detailed Table (Table ID) for two reasons. First, one needs it in order to access the correct estimates and margins of error files for the desired table. Second, the field start position for the estimates or margins of error of a certain Detailed Table depends on its sequence number.

The Sequence Number and Table Number Lookup file-- available as an Excel spreadsheet, text file, and SAS dataset-- lists Table IDs associated with each sequence number. This spreadsheet is available at http://www2.census.gov/acs2010_SPT_AIAN/SelectedPopulationTables/ "Sequence Number and Table Number Lookup" with named the "xls" ".sas7bdat" or".txt"extension. For the extension. the file name is SequenceNumberTableNumberLookup.)

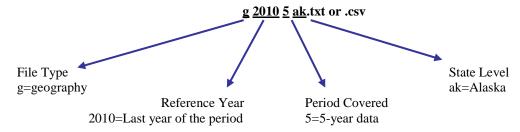

To find the sequence number associated with the table B01001, for example, a user must open and look for that Table ID in the Sequence Number and Table Number Lookup file. Shown below is a screenshot opened to where the "tblid" is B01001. The next column in the file, "seq", shows that this Table ID is associated with the sequence number "0001". In order to access the estimate and margin of error file for Table B01001, a user will need to download the estimate and margin of error files labeled with the sequence number "0001".

A	Α	В	С	D	Е	F	G	Н	1	J
1	fileid	tblid	seq	order	position	cells	total	title	subject_ar	ea
2	ACSSF	B01001	1		7	49 CELLS		SEX BY AGE	Age-Sex

33	ACSSF	B01001	1	30				15 to 17 years		
34	ACSSF	B01001	1	31				18 and 19 years		
35	ACSSF	B01001	1	32				20 years		

2.4 Geography File

A geography file comes with the estimate and margin of error files. This file begins with a "g" and is an ASCII file using either a position based format or comma delimited format. A geography file exists for each state or state level equivalent.

Geography files are named using the following convention:

	File Name: g20105ak.txt						
Example	Name	Range or Type					
g	File Type	g=geography					
2010	Reference Year	ACS data year (last year of the period for multiyear periods)					
5	Period Covered	1=1-year, 3=3-year, 5=5-year					
ak	State Level	US or abbreviations for state, District of Columbia, and Puerto Rico					

The geography files contain geographic information for an ACS tabulated area, including the name of the area. One variable on the file, called LOGRECNO, is the logical record number and is used to link the level of geography to the estimate and margin of error files. An example of how to use LOGRECNO is discussed in Section 2.5.

The following table provides the layout of the geography file:

Variable Name Description		Field	Starting	Geographic Summary Levels For SPT Tables
		Size	Position	FOR SPI Tables
RECORD CODES				
FILEID	Always equal to ACS Summary	6	1	All Summary Levels
	File identification			
STUSAB	State Postal Abbreviation	2	7	All Summary Levels
SUMLEVEL	Summary Level	3	9	All Summary Levels

There is an Excel template for the geography file named "2010_SFGeoFileTemplate.xls". The template provides users with two rows containing the variable names and their descriptions (as displayed in the above table) for each column in the geography file. It is meant to be used with the comma delimited version of the geography file. The template is available at www2.census.gov/acs2010_5yr/summaryfile/UserTools/ in the zipped "2010 SummaryFileTemplates" zip file. Here is a screenshot of the Excel file:

0														

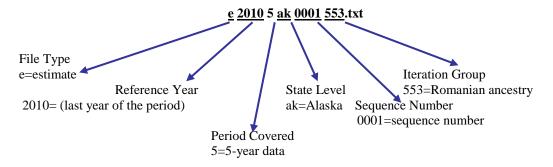

Each state, the District of Columbia, Puerto Rico and the set of cross-state geographies, have one geography file associated with them regardless of how the Summary File is accessed. For example, the following screenshot shows the beginning of the state geography file for Maryland in the 2009 1-year ACS. In the screenshot, the logical record numbers corresponding with the state of Maryland, Allegany County, and Anne Arundel County are circled. The logical record number for the state of Maryland is "0000001", for Allegany County it is "0000012", and for Anne Arundel County it is "0000013".

Excess spaces in the pictured geography file have been removed for illustrative purposes.

2.5 Estimate and Margin of Error Files

Each of the three Summary File directories include zipped files containing estimate files (file names beginning with an "e") and margins of error files (file names beginning with an "m"). The estimate files contain published ACS estimates and the margin of error files contain published ACS margins of error for their respective estimates. Here is the naming convention used for those files:

	File Name: e20105ak0001553.txt						
Example	Name	Range or Type					
e	File Type	e=estimate, m=margin of error					
2010	Reference Year	ACS data year (last year of the period for multiyear periods)					
5	Period Covered	1=1-year, 3=3-year, 5=5-year					
ak	State Level	US or abbreviations for state, District of Columbia and Puerto Rico					
0001	Sequence Number	0001 to 9999					
553	Iteration Group	001 to 585 (see Appendix G for the list of groups and their codes)					

The estimates and margins of error for Detailed Tables are grouped together by sequence numbers, as discussed in <u>Section 2.3</u>. There is an estimate and margin of error file for each sequence number.

The format of the estimate and margin of error files are identical; they are strings of commadelimited ASCII text. Each row represents a different geographic area and the first six fields contain metadata such as the geographic area and the sequence number. Following those fields

are the estimates or margins of error for the Detailed Tables. Starting and ending positions of the fields associated with each, Detailed Table can be found using the Sequence Number and Table Number Lookup file, which is discussed in <u>Section 2.3</u>. The estimates or margins of error for one Detailed Table span several fields within a row.

Here is the record layout of the estimates and the margin of error files:

Field Name	Description	Column Number
FILEID	File Identification	1
FILETYPE	File Type	2
STUSAB	State/U.SAbbreviation (USPS)	3
CHARITER	Character Iteration	4
SEQUENCE	Sequence Number	5
LOGRECNO	Logical Record Number	6
Field # 7 and up	Estimates	7 and up

Going back to the example from <u>Section 2.3</u>, we know that table B01001 corresponds to sequence "0001". Additionally, the Sequence Number and Table Number Lookup file (as shown earlier) tells us that table B01001 begins at position seven and contains 51 cells.

In order to get estimates for Maryland; Allegany County, MD; and Anne Arundel County, MD one must recall the logical record numbers associated with each geography. In <u>Section 2.4</u>, we identified these to be "0000001", "0000012", and "0000013", respectively. The logical record number, LOGRECNO, must be used to merge the geography information to the estimate and margin of error files.

The example below shows the estimate file for sequence "0003" and all geographies for the state of Maryland using the 2010 ACS 1-year Summary File. Note that each row has a uniquely assigned logical record number, called LOGRECNO, which links the estimate to a specific geographic area. The pictured example has the logical record numbers corresponding to Maryland, Allegany County, and Anne Arundel County circled. Estimates for table B08406 at these geographic levels can be found within their respective rows at field seven and continuing for 50 additional fields.

2.6 How to Join the ACS Summary File to the TIGER/Line Shapefiles

TIGER/Line Shapefiles allow data users to link directly to geographic areas to data from the American Community Survey and other surveys. The TIGER/Line Shapefiles are designed for use with geographic information system (GIS) software. Learn more about TIGER/Line Shapefiles at www.census.gov/geo/www/tiger/.

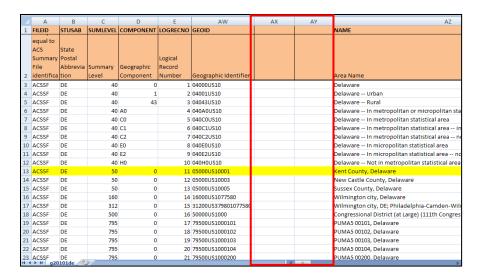

The variable GEOID joins the ACS Summary File to the TIGER/Line Shapefiles. For the ACS Summary File, GEOID is located in column AW of the geography file. It is not found in the estimates or margins of error files. (As discussed in previous Sections, the variable LOGRECNO is needed to join together the parts that make up the Summary File: the geography, estimates, and margins of error files). GEOID's corresponding variable in the 2010 TIGER/Line Shapefiles is GEOID10.

We will walk through an example of joining these files using Kent County, Delaware. In the ACS Summary File, the GEOID is 05000US10001. In the TIGER/Line Shapefiles, the GEOID10 is 10001. (GEOID is a concatenation of all the codes associated with a given geographic area, such as the state FIPS code, county FIPS code, etc. The exact concatenation varies by geographic area. In this example, 10=state FIPS code and 001=county FIPS code.)

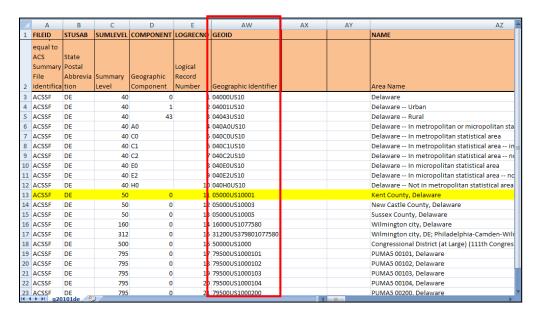

The ACS Summary File GEOID contains the necessary information to connect to the TIGER/Line Shapefiles, but it needs to be modified in order to exactly match up. Notice that GEOID, 05000US10001, contains the GEOID10 string, 10001. In order to create an exact match of GEOID and GEOID10, it is necessary to remove all of the characters before and including the letter "S" in the ACS Summary File. By removing these characters, the new GEOID in the ACS Summary File exactly matches the field GEOID10 in the TIGER/Line Shapefiles.

The following is an example of how to modify the ACS Summary File's GEOID in Excel 2007 so it can be joined with TIGER/Line Shapefiles:

- Open the ACS Summary File comma delimited geography file in Excel. This example uses Delaware's geography file (g20103de.csv) available at www2.census.gov/acs2010_3yr/summaryfile/ with the column headers from the geography file template copied into Delaware's geography file. Learn more about the geography file template in <a href="https://www.section.gov/secti
- 2) Insert 2 blank columns to the right of the column "GEOID." Your modified GEOID will eventually go into the second column. (Note: Columns F through AV in the diagrams following are hidden for illustrative purposes.)

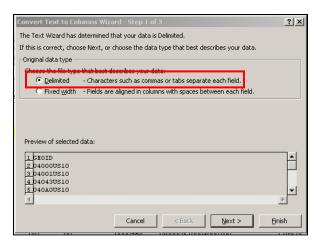

3) Next, select the column "GEOID."

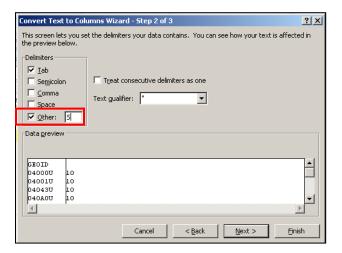

4) Select the "Data" tab from the top menu, and then select "Text to Columns." The "Convert Text to Columns Wizard" box should pop up.

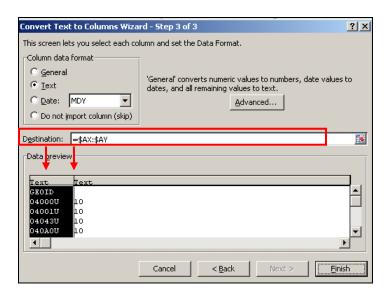

5) In the "Convert Text to Columns Wizard," select "Delimited" under "Choose the file type that best describes your data:" then click "Next."

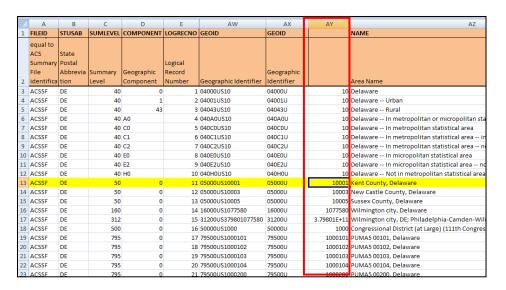

6) Check "Other" as the delimiter and type the letter "S" into the box. Click "Next."

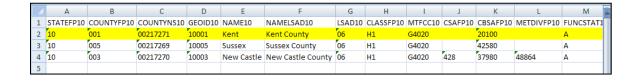

7) In the "Data preview" window, click on the top of both columns in "Data preview" and select "Text" under "Column data format." In "Destination," select the two blank columns that you created in Step 1. Click "Finish."

8) Column AY should now contain the modified GEOID that corresponds to GEOID10 in the TIGER/Line Shapefiles. The second screenshot shows the TIGER/Line Shapefile for Kent County, Delaware.

9) The ACS Summary File and the TIGER/Line Shapefile should now be ready to be joined using GIS software. Visit "Working with TIGER/Line Shapefiles" at http://www.census.gov/geo/www/tiger/wwtl/wwtl.html to learn more about how to access and use the TIGER/Line Shapefiles.

3 User References

3.1 Detailed Tables

The full list of detailed tables for this release is available in Appendix E.

3.2 Summary Levels/Components for Detailed Tables

The full list of summary levels and components for this release is outlined in Appendix F.

3.3 Sequence Number and Table Number Lookup

It contains information on the relationship between the sequences and the tables, and indicates the relationship between the sequences and the subject areas. The Sequence Number and Table Number Lookup file is available in Excel, text, and SAS dataset format, and is located here: http://www2.census.gov/acs2010_SPT_AIAN/SelectedPopulationTables/.

3.4 Table Shells List

It contains Table ID, Line Number, Unique ID (table ID + Line Number) and stub. The table shells list is located on the following site:

http://www2.census.gov/acs2010_SPT_AIAN/SelectedPopulationTables/.

3.5 Excel Geography File

It contains logical record numbers (LOGRECNO), geography ID, and geographic labels by state. There are 53 workbooks in the spreadsheet: one for each state, the District of Columbia and Puerto Rico, and one for geographies that cross state boundaries. It is located on the following site: http://www2.census.gov/acs2010_SPT_AIAN/SelectedPopulationTables/Geography/.

3.6 Selected Population Tables Code List

It contains the race groups, American Indian and Alaska Native tribes, Hispanic origin groups, and ancestries that are included in the SPT. The list is available at www.census.gov/acs/www/data_documentation_main/and in Appendix G.

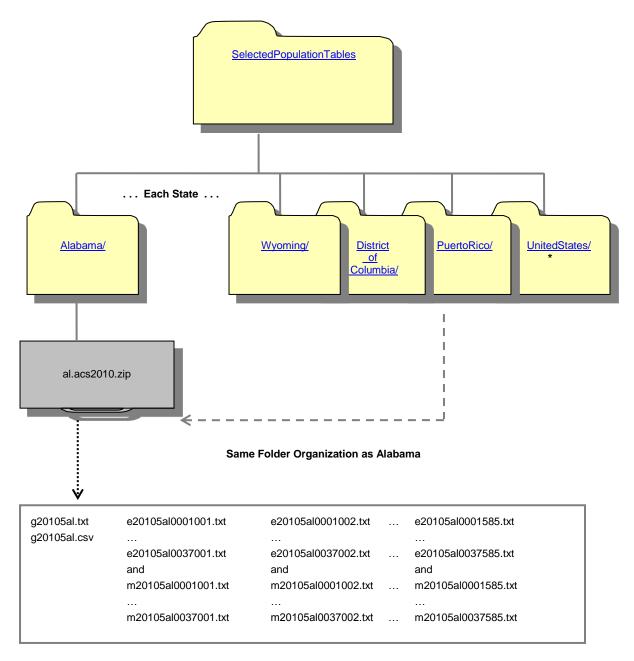

3.7 Comparison Guidelines for AIAN Tribes

The guidelines to help compare data from Census 2000 Summary File 4 and the ACS SPT are in Appendix H.

Appendix A: Supplemental Documentation

Supplemental documentation concerning the American Community Survey, to assist users using this technical document, is located on the ACS Website at: www.census.gov/acs/www/data_documentation_main/. Documents such as the Subject Definitions, Accuracy of the Data, and Code Lists are available on the URL listed above.

Appendix B: Graphical Representation of ACS Summary File Organization

^{*} The United States folder contains tables for summary levels that cross state boundaries, such as the nation, regions, divisions, metropolitan statistical areas and tribal reservations. It does not contain tables for geographies that are entirely within a state, such as counties and places; for those tables, go to the folder for that state.

Appendix C: User Notes

C.1 Population Thresholds

The Census Bureau has unique codes for hundreds of race, tribal, Hispanic origin, and ancestry groups. This large number of potential iteration groups, many of which are numerically small populations, necessitates the requirement for population thresholds. Population thresholds are used to develop a reasonable iteration group list appropriate by level of geographic detail and to prohibit the disclosure of data for individuals or households in those geographic areas.

Population thresholds were applied in a two-step process. The table below summarizes the application of the two population thresholds for the proposed ACS products. These restrictions are comparable to the restrictions that were applied in Census 2000.

Population Threshold Description	ACS Selected Population Tables Population Threshold
 First Threshold to Meet – To Become An Iteration Group Minimum population required at the U.S. national level to be included on the iteration group list Population count used to meet the threshold will be based upon 2010 Census data for race, tribal, and Hispanic origin groups Population estimate used to meet the threshold will be based upon ACS 5-year data or Census 2000 sample data for ancestry groups (whichever estimate is largest) 	7,000
 Second Threshold to Meet – To Release a Data Table Minimum count of unweighted sample cases in a specific geographic area required for each iteration group population to release a data table for that geographic area Count of unweighted sample cases used to meet the threshold is based upon ACS 5-year data for race, tribal, Hispanic origin, and ancestry groups 	50

However, there are some exceptions to the 7,000 U.S. national-level population threshold for the Selected Population Tables. In order to provide a complete presentation of the multiracial population, all 57 multiracial combinations (e.g., American Indian and Alaska Native *and* Asian *and* Native Hawaiian and Other Pacific Islander) will be included as iteration groups for the Selected Population Tables, just as in the Census 2000 SF4. Additionally, some numerically small American Indian and Alaska Native tribal groupings and Pacific Islander populations were included on the Census 2000 SF4 iteration group list even though their counts were somewhat less than 7,000 nationally. These groups were "grandfathered" onto the Selected Population Tables iteration group list if they did not meet the population threshold. This will assist in preserving the historical continuity of these data.

The requirement for at least 50 unweighted sample cases of an iteration group in a geographic area in order to release a data table is intended to prohibit the disclosure of data for individuals or households. This second, mandatory sample size threshold was also required to release data tables for iteration groups in geographic areas for the Census 2000 SF4.

For the Census 2000 Summary File 4, there was an additional population threshold applied that required an iteration group population of at least 100 in a geographic area (based on Census 2000 100-percent counts) plus 50 unweighted sample cases in order to generate a data table. The additional population threshold was used to avoid publishing race, tribal, and Hispanic origin group estimates based on sample data that were not published in the Census 2000 Summary File 2 (based on 100-percent counts). This constraint does not exist between the 2010 Census and the ACS. Thus, this additional iteration group population threshold in geographic areas is not being utilized for the Selected Population Tables. If at least 50 unweighted sample cases of an iteration group exist in the 2006-2010 ACS data, then, at the very least, national data tables would be released.

This disclosure avoidance requirement of at least 50 unweighted sample cases, while critical, could result in a break in the historical series of published data for some population groups. It is possible that some iteration groups that met this population threshold for the Census 2000 SF4 will not have at least 50 unweighted sample cases in the 2006-2010 ACS data; therefore, no data tables could be released for the Selected Population Tables.

C.2 Geography Restrictions

For data quality and geographic reasons, some tables are published with specific geography restrictions. For example, the table B05005, Year of Entry by Citizenship Status in the United States, is produced for stateside geographic areas only and the corresponding table B05005PR, Year of Entry by Citizenship Status in Puerto Rico, is produced for Puerto Rico only. Appendix E has a complete list of tables, and if there is a version of the table ending in "PR", the version without the "PR" is only for stateside geographies. There are no other geographic suppressions for these tables other than that and the restrictions discussed in Section C.1.

C.3 Jam Values

Some data values represent unique situations where either the information to be conveyed is an explanation for the absence of data, represented by a symbol in the data display, such as "(X)", or the information to be conveyed is an open-ended distribution, such as 115 or greater, represented by 115+.

The following special data values can appear in the ACS Summary File table as an explanation for the absence of data:

• Missing Value = ""

A missing string indicates that the estimate is unavailable. (This appears in the estimates and margins or error files as two commas adjacent to each other without anything between them, or if the last cell in a data file is filtered then you get a comma followed immediately by a carriage return or EOF.) A missing value indicates when an estimate is missing because of filtering for geographic restrictions, coefficients of variations (CV), or was removed due to the Disclosure Review Board's (DRB) requirements. For more detail on filtering, please see Appendix C.5.

• Dot = "."

A dot indicates when the estimate has no sample observations or too few sample observations. In the margin of error files, this value could also indicate that the margin of error is unavailable for a median estimate that has been replaced with a jam value.

• Zero = "0"

A "0" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate. This is similar to the "*****" symbol used in American FactFinder.

• Negative 1 = "-1"

This indicates that an estimate does not contain a Margin of Error. Tables starting with B99 do not have margin of error (MOE) associated with them. The MOE calculations are set to 1 for these tables.

Jam Values for Medians

The following is a listing of the "jam values" for medians. Jam values are numeric placeholders that represent open intervals above or below a number. For example, the jam value of "2499" for table B19013 does not indicate a dollar amount, but rather it means that the median is below \$2,500 and is not available.

Jam Value	Actual Meaning	Use for Medians
0	1 or less	Age, Duration of Marriage
9	9.0 or more	Rooms
10	10.0 or less	Gross Rent as Percentage of Income, Owner Costs as Percentage of Income
50	50.0 or more	Gross Rent as Percentage of Income, Owner Costs as Percentage of Income
99	100 or less	Rent, Gross Rent, Selected Monthly Owner Costs, Monthly Housing Costs
101	101 or more	Duration of Marriage
116	115 or more	Age
199	200 or less	Tax
1001	1,000 or more	Selected Monthly Owner Costs
1939	1939 or earlier	Year Built
1969	1969 or earlier	Year Moved In
2001	2,000 or more	Rent, Gross Rent
2005	2005 or later	Year Built, Year Moved In
2499	2,500 or less	Income, Earnings
4001	4,000 or more	Selected Monthly Owner Costs, Monthly Housing Costs
9999	10,000 or less	Value

Jam Value	Actual Meaning	Use for Medians
10001	10,000 or more	Tax
200001	200,000 or more	Income
250001	250,000 or more	Income, Earnings
1000001	1,000,000 or more	Value

C.4 Display of Estimates

The estimates in the summary files are stored using standard notation instead of in scientific notation. The largest estimate in a Summary File contains 14 digits.

C.5 Sequences Used for United States Tables and for Puerto Rico Tables

Several tables differ between the United States (the 50 states and the District of Columbia) and Puerto Rico because the wording of the Puerto Rico Community Survey questionnaire differs slightly but significantly from the American Community Survey questionnaire. The matching table used for United States geographies has the same table ID but without the trailing "PR" (i.e. B06003 and B06003PR). These tables are different because the categories slightly differ. For example, one of the categories in table B06003 is "Born in state of residence," while the corresponding category in table B06003PR is "Born in Puerto Rico."

In these cases, the US tables are in one sequence, and the Puerto Rico tables are in another sequence. Using Appendix E, you can see that table B06003 is in sequence 4, while table B06003PR is in sequence 35. The table below shows the sequences used for the US versions of these tables and the corresponding sequence for the Puerto Rico versions.

Sequence for US Version of Table	Sequence for PR Version of Table
2 (US)	34 (PR)
4 (US)	35 (PR)
5 (US)	36 (PR)
32 (US)	37 (PR)

In addition to these tables with different categories for the US and PR, there are other tables in the sequences that do not differ. These other tables are provided in both sequences. For example, table B05003 "Sex by Age by Citizenship Status" is available both in sequences 2 and 34, since the set of tables in these sequences has been divided to place table B05005 "Year of Entry by Citizenship Status in the United States" in sequence 2 and table B05005PR "Year of Entry by Citizenship Status in Puerto Rico" in sequence 34.

Appendix D: Example—How to Create a Table

If you want to create Table B01001, "Sex By Age" for Iteration Group "Alaska Native alone (M44-R99)" for the state of Alaska. Which files do you need? How do you read the files?

You will need the following items:

- 1) Appendix G to find the 3 digit iteration group code for "Alaska Native alone (M44-R99)"
- 2) The Sequence_Number_and_Table_Number_Lookup.xls spreadsheet to find which sequence contains Table B01001.
- 3) The zipped file for Alaska ("ak.acs2010.zip") containing the estimate and margin of error files for the sequence and iteration group of interest ("e20105ak0001008.txt" and "m20105ak0001008.txt")
- 4) The geography file for Alaska ("g20105ak.txt")

Start with Appendix G "Selected Population Tables Code List" and locate the 3-digit iteration group code for "Alaska Native alone (M44-R99)." The 3-digit group code, "008", is used in the naming convention of the data files.

Next use the Sequence_Number_and_Table_Number_Lookup.xls spreadsheet, under the "TBLID" column, and look for the value "B01001". You will see that the "Sequence Number" is "0001." This means that the estimates you are looking for are in the data file "e20105ak0001008.txt".

How do you know this is the right file? You know this from the name of the file:

- "e" stands for estimate
- "2010" is the year
- "5" means that these are 5-year estimates
- "ak" is the state (Alaska)
- "0001" is the sequence number (which contains the data for Table B01001)
- "008" is the iteration group code for "Alaska Native alone (M44-R99)"

Likewise, you need the "m20105ak0001008.txt" file for the margins of error because we want the estimates and margins of error for Alaska. Visit <u>Section 2.5</u> for more information on the naming convention and record layout of the estimate and margin of error files.

When you open the estimate file, e20105ak0001008.txt, you will see the following commadelimited fields on the first line:

ACSSF,2010e5,ak,008,0001,0000001,91994,46369,4431,4419,4184,3030,2162,...

The first six fields – from "ACSSF" to "0000001" – are identifiers:

- 1) The first field tells you that this is an ACS Summary File:
- 2) The second tells you that these data are five-year estimates for the year 2006-2010 (notice the "e" between "2010" and the "5" at the end);
- 3) The third tells you the state, ie. "ak" is Alaska;

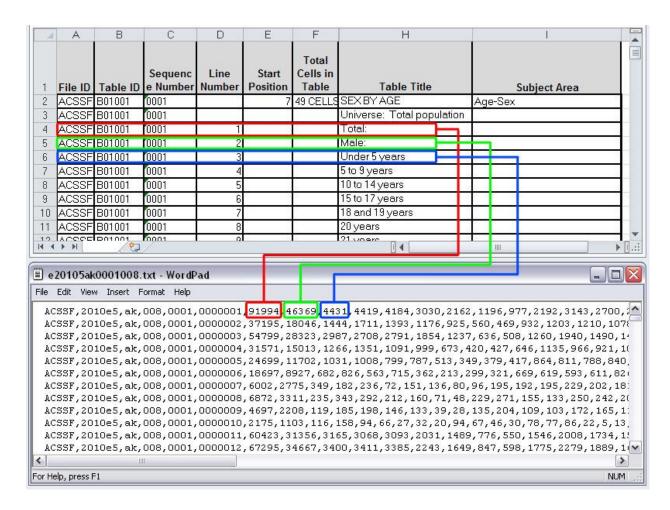

- 4) The fourth is an iteration group code;
- 5) The fifth is the sequence number,
- 6) The last is a logical record code, LOGRECNO. The LOGRECNO identifies the geographic area within a state.

These identifiers begin each new line in the estimate file, and the same holds true for the margin of error files. You can compare these identifiers with those in the respective margin of error file, m20105ak0001008.txt.

Next, use the geography file for Alaska to determine the location within the state to which the data refer. The appropriate file is g20105ak.txt, where "g" stands for geography, "2010" is the year, "5" is the period estimate (in this case, 5-year estimate), and "ak" is the state. The geography file, g20105ak.txt, defines the LOGRECNO.

Each LOGRECNO in this file specifies a geographic area pertaining to the state. For example, a LOGRECNO of "0000001" means the state of Alaska; a LOGRECNO of "0000002" means just the urban areas in Alaska; a LOGRECNO of "0000003" refers to just rural areas in Alaska. (Each state geography file also contains the lower-case FIPS State Code.) Please be aware that each state has its own geography file. For more information, visit Section 2.4.

Glancing back at the estimates file and Table Number Lookup file, you will see that Table B01001 in sequence "0001" has a "start position" of 7. From this point forward, for 49 fields (indicated by the "Total Cells in Table" column in the same file), each field corresponds to the value of a "line number" in the table. Therefore, field number seven, the 91994 value, corresponds to line number one, which is "Total". Field number eight, the 46369 value, refers to line number two, which is "Male." Field number nine, the 4431 value, corresponds to line number three, which is "Under 5 years." This continues all the way up to line number 49, at which point Table B01001 ends. See the screenshot for a visual representation of this process.

Merging the geography file, the table shell, and the estimate and margin of error files together creates an excerpt of Table B01001, shown below:

LOGRECNO	NAME	Table ID	Line Number	Table Title	Estimate	Margin of Error
0000001	Alaska	B01001	1	Total:	91994	1600
0000001	Alaska	B01001	2	Male:	46369	961
0000001	Alaska	B01001	3	Under 5 years	4431	300
0000001	Alaska	B01001	4	5 to 9 years	4419	315
0000001	Alaska	B01001	5	10 to 14 years	4184	288

Appendix G: Selected Population Tables Code List

This appendix lists the 392 possible iterations for the Selected Population Tables, and their corresponding iteration group code. The iterations comprise the total population, 132 race groups, 111 American Indian and Alaska Native tribe categories (reflecting 60 individual tribes), 50 Hispanic or Latino groups, and 99 ancestry groups. This compares with 336 possible iterations that were in the Census 2000 Summary File 4. The Census 2000 Summary File 4 included total population, 132 race groups, 78 American Indian and Alaska Native tribe categories (reflecting 39 individual tribes), 39 Hispanic or Latino groups, and 86 ancestry groups.

In order for any of the tables for a specific group to be shown in ACS 5-year Selected Population Tables, the data must meet a minimum population threshold. Those thresholds are explained in Appendix C.1.

The use of the iteration group codes in the naming of the SPTSF file names is described in Sections 2.2 and 2.5.

Iteration Group Code	Group Name
001	Total population
Race Grou	ps
002	White alone (100-199)
003	White alone or in combination with one or more other races (100-199) & (100-299) or (300, A01-Z99) or (400-999)
004	Black or African American alone (200-299)
005	Black or African American alone or in combination with one or more other races (200-299) & (100-299) or (300, A01-Z99) or (400-999)
006	American Indian and Alaska Native alone (300, A01-Z99)
007	American Indian alone (A01-M43)
800	Alaska Native alone (M44-R99)
009	American Indian and Alaska Native alone or in combination with one or more other races (300, A01-Z99) & (100-299) or (300, A01-Z99) or (400-999)
010	American Indian alone or in any combination (A01-M43) & (100-299) or (300, A01-Z99) or (400-999)
011	Alaska Native alone or in any combination (M44-R99) & (100-299) or (300, A01-Z99) or (400-999)
012	Asian alone (400-499)
013	Asian Indian alone (400-401)
014	Bangladeshi alone (402)
072	Bhutanese alone (403)
073	Burmese alone (404)
015	Cambodian alone (405-409)
016	Chinese alone (410-419)
017	Chinese (except Taiwanese) alone (410-411)
018	Taiwanese alone (412-419)
019	Filipino alone (420-421)
020	Hmong alone (422)
021	Indonesian alone (423-429)
022	Japanese alone (430-439)
023	Korean alone (440-441)
024	Laotian alone (442)

Iteration Group Code	Group Name
025	Malaysian alone (443)
075	Mongolian alone (465)
076	Nepalese alone (472)
026	Pakistani alone (445)
027	Sri Lankan alone (446)
028	Thai alone (447-449)
029	Vietnamese alone (450-459)
031	Asian alone or in combination with one or more other races (400-499) & (100-299) or (300, A01-Z99) or (400-999)
032	Asian Indian alone or in any combination (400-401) & (100-299) or (300, A01-Z99) or (400-999)
033	Bangladeshi alone or in any combination (402) & (100-299) or (300, A01-Z99) or (400-999)
080	Bhutanese alone or in any combination (403) & (100-299) or (300, A01-Z99) or (400-999)
081	Burmese alone or in any combination (404) & (100-299) or (300, A01-Z99) or (400-999)
034	Cambodian alone or in any combination (405-409) & (100-299) or (300, A01-Z99) or (400-999)
035	Chinese alone or in any combination (410-419) & (100-299) or (300, A01-Z99) or (400-999)
036	Chinese (except Taiwanese) alone or in any combination (410-411) & (100-299) or (300, A01-Z99) or (400-999)
037	Taiwanese alone or in any combination (412-419) & (100-299) or (300, A01-Z99) or (400-999)
038	Filipino alone or in any combination (420-421) & (100-299) or (300, A01-Z99) or (400-999)
039	Hmong alone or in any combination (422) & (100-299) or (300, A01-Z99) or (400-999)
040	Indonesian alone or in any combination (423-429) & (100-299) or (300, A01-Z99) or (400-999)
041	Japanese alone or in any combination (430-439) & (100-299) or (300, A01-Z99) or (400-999)
042	Korean alone or in any combination (440-441) & (100-299) or (300, A01-Z99) or (400-999)
043	Laotian alone or in any combination (442) & (100-299) or (300, A01-Z99) or (400-999)
044	Malaysian alone or in any combination (443) & (100-299) or (300, A01-Z99) or (400-999)
083	Mongolian alone or in any combination (465) & (100-299) or (300, A01-Z99) or (400-999)
084	Nepalese alone or in any combination (472) & (100-299) or (300, A01-Z99) or (400-999)
085	Okinawan alone or in any combination (444) & (100-299) or (300, A01-Z99) or (400-999)
045	Pakistani alone or in any combination (445) & (100-299) or (300, A01-Z99) or (400-999)
046	Sri Lankan alone or in any combination (446) & (100-299) or (300, A01-299) or (400-999)
047	Thai alone or in any combination (447-449) & (100-299) or (300, A01-Z99) or (400-999)
048	Vietnamese alone or in any combination (450-459) & (100-299) or (300, A01-Z99) or (400-999)

Appendix H: Comparison Guidelines for AIAN Groups

Comparisons for many tribes and tribal groupings across the decade are generally not appropriate due to the multiple changes in the classification of American Indian and Alaska Native tribes and tribal groupings between Census 2000 and the 2010 Census. These changes were based on specific requests and suggestions from tribal leaders, American Indian advisors, and data users. These suggestions and other research resulted in revisions to the component American Indian tribes that defined a particular tribe and/or tribal grouping. For example, "Hopi" is now a separate tribal grouping, where it was classified under the "Pueblo" tribal grouping in Census 2000. The broad "Latin American Indian," grouping has been replaced by the individual tribal groupings of "Central American Indian," "Mexican American Indian," "South American Indian," and "Spanish American Indian."

For Alaska Natives, there are six tribal groupings in the 2010 ACS 5-Year Selected Population tables. Individual "Eskimo" tribal groupings, with the exception of "Yup'ik," shown in the Census 2000 American Indian and Alaska Native Summary File (AIANSF) are now classified under one tribal grouping ("Inupiat"). "Yup'ik" was included within the 2000 "Eskimo" tribal grouping but became a separate tribal grouping in 2010.

Generally, iteration groups that have changed between the Census 2000 SF4 and the 2010 ACS 5-Year Selected Population tables, or have met the required population threshold for the first time are denoted by a new or different iteration code than the Census 2000 SF4 iteration groups had. For example, the 2010 ACS iteration, 321-- Pueblo tribal grouping alone, should not be compared with the Census 2000 SF4 iteration, 256-- Pueblo alone, because the ACS iteration does not include two Hopi tribes that were previously coded under Pueblo (Hopi Tribe of Arizona and Arizona Tewa), but are now coded separately. A complete list of comparable versus non-comparable iteration codes between 2000 and 2010 is available below.

Code	AIAN Group (race code/s)	Compare with Caution to Census 2000 SF4	Do Not Compare with Census 2000 SF4
